Education

Degree — 2022

Universiti Kebangsaan Malaysia · Software Engineering

This course introduces the principles, methods, and tools for designing and developing reliable, efficient, and maintainable software systems. Students will explore the software development lifecycle, including requirements analysis, system design, implementation, testing, deployment, and maintenance. Emphasis is placed on project management, teamwork, software quality assurance, and the use of modern development methodologies such as

Agile and DevOps.

Diploma — 2019

University Malaya · Information Technology

This course provides students with a broad foundation in the principles and practices of information technology. It covers the use, design, and management of computer systems, networks, databases, and software applications that support business, research, and communication. Students will explore both technical skills and organizational considerations, preparing them to solve real-world IT challenges.

SPM — 2017

SMK Kuala Lumpur · Science

The Science Stream is one of the main academic pathways offered to upper secondary school students in Malaysia (Form 4–5) as they prepare for the SPM examination. It is designed for students with strong interest and ability in science and mathematics. This stream provides the foundation for pursuing tertiary studies in fields such as medicine, engineering, information technology, pure sciences, and other technical disciplines.
